

» AlxEye – Less Scrap. Higher Throughput. Better Quality.

Manufacturers deploying AlxEye have achieved:

- **100% quality control** through 100% in-line inspection
- Up to **30% reduction** in defect-related losses
- Up to **25% improvement** in line efficiency
- **Faster response** to quality issues and more stable production runs

Turn Quality Inspection into a Competitive Advantage

AlxEye replaces reactive inspection with **continuous quality intelligence**—helping manufacturers reduce risk, control costs, and scale smarter.

What AlxEye Delivers

Immediate, measurable benefits

- **100% quality control:** continuous inspection, not random sampling
- **Earlier defect detection:** stop issues before they spread downstream
- **Lower scrap and rework:** protect yield and margins
- **Higher production confidence:** real-time monitoring at full line speed
- **Smarter decisions:** identify patterns and likely root causes, not just symptoms

How It Works

1. **Monitor:** AI-powered cameras continuously observe the production line
2. **Detect:** Defects and anomalies are identified in real time
3. **Analyze:** Patterns reveal likely drivers and root causes
4. **Optimize:** Operators adjust parameters with data-backed clarity

Built for Industrial Reality

- Works at **high production speeds**
- Adapts to **different surfaces, textures, and materials**
- Integrates with **existing production lines** with minimal disruption
- Scales across **multiple lines and facilities**

Industries Served

Metals & Aluminum

Polymers & Plastics

Paper & Board

Food Processing

Textiles

Packaging
